http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Valerie Melillo

We have been coming to the Outer Banks and Hatteras Island for 16 years and would plan someday soon to retire there, therefore this a very important issue to my wife and I. We support what DARE COUNTY is recommending and beleive construction of a replacement bridge is not only vital but it needs to be acted upon anc construction started immediately! Jim Weisenberger

You are toying with the residents of Hatteras and Ocracoke Islands. If and when the Bonner Bridge fails before a new bridge is opened, the lives of many residents will be ruined. I suggest you develop a plan to compensate the business owners and their employees when this happens. The federal bureaucracy is killing this country. We, the people; does it matter anymore? Build the bridge NOW!

Sincerely,

Frank

As a long time visitor to the Outer Banks, I have witnessed the failure of the Bonner Bridge over the years. I know now is the time for a replacement bridge and not another study. It would seem to make fiscal sense to build a new parallel bridge rather than spend more time (which the bridge has little of) and monies that are limited. I would hope that in you infinite wisdom you will make the right decision and approve the parallel bridge. Thank you, Rod Willis

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

As a resident of Ocracoke Island, I use the bridge as my only access to and from the island. My children's physician and dentist are located in Nags Head and we use the hospital there for our emergencies. All my supplies for my home as well as my shop come across the bridge as the Swan Quarter and Cedar Island ferries are too time consuming to complete a supply trip in a day. Please move forward to replace the bridge without delay!

Sincerely,

Melinda Fodrie

Now is the time to begin construction on the new bridge that will parallel the old Bonner Bridge. You have been studying this long enough and we need a new bridge badly so as to protect Hatteras Island as a good place to live and to vacation. Please do not conduct more studies ... which only delay the beginning of construction. Please eliminate the long bridge option, as it is far too expensive and impractical. As a property owner for over 30 years on the island, I have an investment in the future of the island and really urge to you being work immediately.

Sincerely,

Julie B. Slavik

I have been traveling to the Outer Banks since the early "70"s and have since built a vacation rental house in Frisco. The Bonner bridge is out dated and needs to be rebuilt or another bridge along side of it needs to be built. Don't wait till it's too late. Building a new bridge is the right thing to do. Thank You. No more wasting precious time! - The bridge must be replaced ASAP or the consequences may be extreme. - Consider the use of artificial reefs in the surf zones of NC Highway 12 overwash "hot-spot" areas. Artificial reefs are the most environmentally friendly and economical solution to the problem and they can be designed to provide an excellent recreational resource benefiting surfers and fisherman.

Subject: Comment on Bonner Bridge Environmental Assessment

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

This draft says it all.

Sincerely,

H. Joseph Canel

Let's pretend the bridge collapsed, dispense with the finger pointing, righteous indignation and just build the parallel bridge. Money to bridge the overwash areas can be done later. NC and the Fed do not have the \$ to do anything more elaborate. Do not wait for a tragedy.

I am very much for the replacement of a parallel bridge. I come to visit the outerbanks area at least twice a year. It is my favorite place to go to get away and relax on the beaches of Corolla to the beaches of Hatteras. I love that place and have been coming there since 1975, so keep us safe by building a new parallel bridge. Also keep me coming back to the beaches that are accessible only by 4-wheel drive.

Sincerely,

This situation is critical and the Bonner Bridge needs to be replaced immediately. The strip of sand known as Hatteras provides the tax base for the state of NC. It would be devastating not only to the citizens of Cape Hatteras but to the state as a whole if that bridge was out. I own property in Hatteras Village and I pray that the bridge can be replaced as soon as possible.

Sincerely,

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

The Bonner Bridge is the life line to the area of the Outer Banks, south of Oregon Inlet. The bridge is important as it is a habitat for marine life, and the only safe way off the southern islands in case of a storm. If the bridge is in danger of inability to carry motorists, then it endangers the lives of those that are south of it. I understand and respect the position of minimal impact to the enviroment with the construction of a new bridge, but in a time of economic distress, the easiest and safiest, most cost efficent to the state, is the best bet. With out bridge access, there is no beach access. I travel the bridge multiple times a year for vacations with the family and its always the one hour mark for the end of the vacation drive. My kids see the bridge and know that we are almost there. Please take into understanding the amount of motorists that depend on the Bonner Bridge for the relaxation of the family and the importance to the local economy that has suffered incredibly through the last few years. Im sure that the NCDOT has thought the bridge plans through and are making the best choices that they can. Thank you Ken

Sincerely,

Ken Smith

I have just came home from work, i live in Michigan and care very much about the OBX. Please work towards replacing the Bonner Bridge with a parallel bridge, you have a great chance to make a beautiful bridge when a Long bridge is too expensive. Construction could start ASAP and there is a Transportation Management Plan for Highway 12.

Sincerely,

patrick mason

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Begin construction immediately for safety reasons

Sincerely,

Katherine Hooper Smith

We enjoy the outer banks every year as our vacation spot. We always go to Waves or Avon as our choice places so the bridge is important to us and we ask that it be replaced now. Regards, Larry and Betty Mcbee

Strongly in support of immediate action -- I live on Hatteras and work across the U.S. and Europe. The thought of losing access due to unnecessary delays does not make sense. Enough studies, let's build!

I agree with all of the above. However, the environmentalist know the same thing and think that if they keep delaying the process then the Bridge will fall in and their problem will be over. They don't seem to realize that everything South of the Bridge is a Recreational Area and not a Bird Sanctuary. Stop delaying and start building!!! Bill

Please replace the Bonner Bridge NOW!! Our family has been visiting Hatteras Island since 1970. We were finally able to buy a home in Avon, 3yrs ago. We love it there and have many close friends, locals and visitors who enjoy this beautiful Island. We need the bridge now to maintain the lives of the local residents and all the visitors that come to visit. The lives of many are at stake if this isn't done NOW. We especially have to protect the residents, this is their only way on and off the Island for a Hurricane or for everyday commuting. It is a dangerous situation and we need action NOW!!!

Sincerely,

We live in a world of changes, but one thing that remains constant in our lives & hearts is our home. The ability to live there and return there for time to come is important for all. Without the bridge peoples lives will suffer, our economy will suffer, our state will be diminished, and what is will be no longer. Show the world, the country, our state, and the people who care about it all that we do care about them and their lives- follow and build as the recommendation states above. Then put in place (after the bridge is set) a program of awareness, conservation, and living together that will support ALL and Everyone. This is submitted by a Hatteras Is. home & business owner who pays taxes in support of this proposal.

Sincerely,

Anne Andrews

Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I am an home owner in Nags Head for 7 years now and I cannot understand why this project has taken over 20 years to get moving. The safety rating of 2 out of 100 is implorable & should be to the powers that be totally unacceptable. I cannot understand why anyone would put so many lives at risk. When we experienced other bridges such as the one in Minnesota that collasped a few years ago it was quite clear that officals need to inspect consistently and budget funds for first for such improtant infrastcure project. Please do not let another catastrophe happen in one of our most beautiful & cherished National Parks. Please replace the Bonner Bridge ASAP!!

Sincerely,

Nicole Larson

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

Please preserve the access to Hatteras Island and Ocracoke. These are two of the most beautiful, unspoiled places on the earth and it would be a shame for both us and future generations to no longer be able to enjoy them.

In order to get the Bonner Bridge Replacement and Parallel bridges jump started, we recommend that application for finance be made for financing under the Economic Recovery Act. Suggested motivation should be (a) local employment generation and (b) multiplier effects to the construction and tourism industries. Thank You. Mary & Arthur Hammond-Tooke

Speaking as a home owner on Hatteras Island, the option to replace the Bonner Bridge immediately without further study or delay and eliminate the "Long Bridge" option and to use a TMP for Hiway 12 is not only essential but critical to the safety and well being of residents south of Oregon Inlet. Start construction now!

Please fix the Bonner Bridge NOW. I live in South Eastern VA and travel at least once a year down to Hatteras. I used to live down there part time. The NC and the Federal Govts. treat those islanders like unwanted step children. Roosevelt made jobs for folks and replaced the dunes.....Obama and NC can create jobs and repair that road and the bridge and keep it repaired and ensure their revenue stream at the same time. Just do it!

Sincerely,

Amy Supan

It is disgraceful that the Bonner bridge has been in such bad condition for such a long time. The government is putting peoples lives and livelihoods at stake buy allowing this condition to exist. There are large pieces of concrete breaking off and falling from the underside of the bridge. If people are hurt or killed because of a failure of the bridge people will be held responsible.

heres a thought: why not put a toll up and charge vacationers \$1.00 to cross the bridge. we are vacationing from Richmond, and we would gladly pay that to have a safe, reliable bridge. we've already crossed the bridge 3 times and we will cross again on our way out. of course don't charge the residents or even people with NC tags. it might help alleviate the cost. we are hoping to become permanent residents of Hatteras Island this time next year but before we move our family we want to know that the state will make sure the islanders are safe.

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

The entire future of the Outer Banks of North Carolina depends on the immediate replacement of this old and dangerous bridge. NCDOT -- DO IT NOW WITHOUT FURTHER DELAY!

Sincerely,

William I. Berryhill, Jr.

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I have personally visited Hatteras Island for over 40 years now and witnessed the incredible attraction that these beautiful Islands and its incredible people display. It is unimaginable that any project such as this can be hung up in such environmental politics and wasteful delays. It is time for action and not more waste.

Sincerely,

Gary

How can this state just budget 28 million in gap funds for the next 3 years followed by 15 million the next 47 years to support an unnecessary bridge like the mid- currituck bridge. Before the Bonner bridge is even done. The Mid Currituck bridge is a waste of money in a time when this country is in economic trouble. More wasteful political spending. the mid-currituck bridge will not alleviate traffic on route 12. Vacationers travel up and down route 12 all week long going to shopping, restaurants, 1st flight, jockeys ridge ect. during their stay here on obx. Widen the roads only makes sense but Duck and southern shores don't want their roads widened so the state is willing to spend 800 million on a bridge that won't fix the traffic problems on route 12 and the Bonner bridge is still not fixed.

I work for a wholesale grocery company that would also suffer a drop in our business as we send a tractor trailer load of groceries to customers from Rodanthe to Hatteras Village every week most of the year. If we can't run our truck over the Bonner Bridge our customers can't receive their groceries to stock their shelves for the tourists as well as the local residents. Please start construction on the replacement bridge as soon as possible. Ed Bushby

I drive over this bridge twice a day, five days a week. I always scan the bridge before crossing, to ensure that it at least appears intact. I was in Minneapolis, MN one year after their bridge collapsed-the work area looked like a war zone-yes, after a full year. It is frightening and worrisome that it may take an accident, or the loss of human life to spur action on this bridge. Please do not delay the replacement of this bridge - not only our livelihoods, but perhaps even our lives depend on it.

Sincerely,

Stephanie Bowers

Please replace the Bonner bridge NOW! We have studied this to death. Just build the short parallel and get on with. We are going broke here and can barely meet the cost of living expenses now. If we loose the bridge we will all be bankrupt. This bridge is a lifeline for tourism, hurricane evacuation, power, fuel and medical needs. The people of Hatteras are being held hostage and the state is being extorted by the "environmental" lawyers and groups. The lawyers and CEO's of the organizations trying to block this bridge make big salaries claiming to be environmentalist. I would believe them if they all volunteered their time, but they don't. We have probably spent enough on studies and paperwork to have built the bridge 15 years ago when we should have..... Please have the backbone to damn the torpedos, full speed ahead. Thank you,

Sincerely,

Lou Browning

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Mac Barnhardt

I come to the Outer Banks often and am very concerned that the Bonner Bridge is in very bad shape. I fish around the bridge and see what poor condition it is in. It needs replacement now.

As a concern citizen I'm surprise that there is a hold up to try to improve the bridge for SAFETY & LIABILITY reasons. My family lives in Frisco and when we go visit or they visit us knowing we all have to cross the bridge is frightening. The condition of the bridge is really terrible. A law suit just waiting to happen! The DOT has known about this problem for awhile and still hasn't done anything! It could be one of your family members crossing it one day and it collapses, God help you if it's my family! I bet you wished you would have listen to the people's concern about this matter. PLEASE REPLACE THE BRIDGE!!!!

Sincerely,

Marsha

The Bonnor Bridge is a lifeline for all who live and vacation on Hatteras Island. It is critical for safety and financial survival that it be REPLACED immediately. When the barge hit the bridge years ago and knocked out a span of bridge there was a significant disruption of life. As an athlete I remember arriving home after 3a.m. after a basketball game because of having to take a ferry and having foggy conditions. No one can afford to wait until it's too late. When residents travel with floatation devices in the back of their vehicles b/c the bridge is quickly aging to an uncomfortable level, it's time to act! Please, replace this bridge NOW!

Sincerely,

Bonnie

Not replacing the Bonner Bridge -- which is long overdue -- is asking for a disaster! When the bridge collapses and many death accrue, it will be too late! We've been travelling to Hatteras Village 2-3/year for the past 25 years. We pray you'll have sense enough to keep us alive for many more years!!

I live and work on Hatteras Island year round. The Bonner bridge is one of the worst bridges in the country safety wise. I am fearful every time I cross the bridge. I drive over the bridge with my windows open, and carry flotation devices in my car just in case. I was on Hatteras island in 1990 when the dredge hit the bridge, and damaged a large section, rendering it impassable. Although the inconvenience of having to take ferries to get off the island was great, luckily there was no loss of life. It may be very different the next time, in the event of a collapse. Please begin immediate construction of a new parallel bridge without further environmental studies and delays. Use a Transportation Management plan for development of NC Highway 12. Thanks you for hearing my comments

Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

To further delay this process with further study would be a waste of taxpayer money and stands to jeprodize businesses on Hatteras Island. It is my understanding that more enviornmental studies have already been doon than on other projects. Please do not compromise the safety and well being of all who live and visit on the island.

Sincerely,

Stuart Vines

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). I will never forget the morning I woke up in October of 1991, having been without power for about 8 hours. I turned on the small battery operated radio to hear the news: A barge had hit the bridge and taken a section out of it. I fell to my knees in prayer. I could not imagine how we would get off the island. Not only us, but how would the fish my husband caught, get off the island. How would food get on the island and God forbid, what if there was a medical emergency and someone's life depended on getting off the island? We were without power, cable T.V. and telephone for quite a while. It took sometime to get ferry docks set up. What took 3 seconds to travel over by car, now took over an hour to travel across the Oregon Inlet via ferry. It added an extra hour to the already hour and a half long trip to go Christmas shopping! The Boner Bridge is very important not only to the natives to Hatteras Island, but also the thousands of visitors who visit. Our visitors are our ! lively hood. They spend the money they save all year long, on their vacations spent at Hatteras Island. The Boner Bridge has needed replacing for the past 23 years I have lived here. It's time to stop being reactive, and be proactive and do something about the bridge before it is too late. We need to stop discussing the issue, and put some effort towards replacing the bridge, now!

Sincerely,

Donna Tokazowski

It is depressing that the replacement of the Bonner Bridge has been drawn out more than 18 years. The fact that it's deterioration jepordizes the safety of the drivers, and that the whole economy of the Outer Banks could be gone with the closing of the Bonner Bridge because of it's terrible safety issues is outrageous. Get the New Bridge started now!!!!!!

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Valerie Wagner

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

We have enjoyed coming to the OuterBanks for the last several years. We love the people, the area, the beaches, the fresh seafood. As soon as we cross over the bridge, we can feel the stress of our daily lives lift. We look forward to returning each year and start counting the days the minute we cross over the bridge on our way home. I would really hate to find a new vacation spot due to continued debate and lack of action regarding building a new bridge. The Bonner Bridge should be replaced immediately with a new parallel bridge and the option of the "long bridge" should be eliminated.

Sincerely,

Jennifer Heeringa

The bridge replacement is not orthogonal to the environmental issues. The delay in estimating the impact and in making decision is certainly a problem not a solution.

Sincerely,

Betsy

Please move ahead with a NEW BRIDGE! Enough foot-dragging is enough. I remember ferry travel to and from the island all too well, and I don't think the present level of development on the island would be able to manage it again. We need the bridge NOW - not later! I lived there long enough (13 years) to know.

- Begin immediate construction without further environmental studies and delays

I grew up on Hatteras Island and know how important the bridge is to our community. Not only to those bringing goods to the island, but the islanders who must travel this bridge to visit off-island family, and more importantly, specialists in the medical field. My father's heart and lung cancer doctors in Norfolk are a lifeline to our family. My sisters' cancer doctors in Elizabeth City and Nags Head provide a sense of well-being with their ever so important aftercare. And more importantly, my niece travels the bridge three days a week to a life-saving dialysis center in Manteo. Without a bridge replacement, I have no idea how long my family residing on the island will be able to enjoy their health. One gets the feeling of "anything could happen" while crossing the bridge, after the NCDOT's report on its structural damage. Thank you for your prompt attention to this matter.

Sincerely,

MaryDawn M. Judy

Subject: Comment on Bonner Bridge Environmental Assessment

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

My wife and I own a house on Live Oak Lane in Frisco, NC. We spend as much time as possible on Hatteras - 3 months per year for my wife and 6 weeks for me. When we retire we plan to spend much more time on Hatteras Island. We currently cross the bridge between 20 and 30 times each year. We are concerned about our safety on the bridge and the safety of everyone on the island during a mandatory hurricane evacuation. The time to replace the bridge is now. Eric J. McNamara

I am certain that anyone who was here when the barge hit this bridge in 1990, knows the immediate and long range impacts when it falls or is no longer viable. Can you imagine if there is loss of life. Who bears that responsibility? The need is so immediate. Please proceed with the Record of Decision, so construction can begin.

Sincerely,

Susie Perry

We have recently experienced the dramatic impact of even a brief period without public access to the southern end of Dare County's barrier island/peninsula and Hatteras Island. The replacement of the aged Bonner Bridge to maintain access while providing safety for those who use it is vitally important and should be done right away--before anyone is hurt from traversing an increasingly unsafe bridge--and before residents are irreparably harmed economically.

Sincerely,

It is time to stop talking about this and take action. This bridge has needed replacing for a long time. What's it going to take--a major collapse causing death and injury? How about the lawsuits that would happen if there was a major collapse? I am sure they would cost far more than the cost of replacing the bridge now. I have family living down there that travel that bridge everyday, and I certainly do not want them to be hurt--or worse. Thank you.

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Laura Knappe

As a visitor to the Outer Banks, and Hatteras Island specifically, I urge all those responsible for the safety of the residents and tourists to commit to replacing the Bonner Bridge as soon as possible. Many "would-be" visitors read blogs/travel sites and see the comments about the bridge...snarky posts about wearing a life vest in your car as you cross the bridge, wait "til all the cars in front of you are over and then gun it to get across, etc. The financial life line of Hatteras Island is the Bonner Bridge. If you don't build it, we can't come.

Sincerely,

Janet Ross

There have been ENOUGH studies, meetings, hearings, Environmental drafts, and House Bills to choke a horse. They have done nothing more than delay the replacement of our steadily deteriorating bridge for far too many years. It needs to be built NOW!! People's lives and livelihoods are at stake here. WE don't want a family member, a friend, someone we could know or possibly work with, or any visitors to our beautiful area who travel on the bridge daily, to be put in danger any longer. Delays only increase the looming risk of a catastrophic failure, such as happened in Minnesota. What if it happens here?? Are the groups who are wrangling about the placement of the bridge and who are causing these unconscionable delays, ready to assume responsibility for the possible loss of lives should, God forbid, a collapse occur? Stop all the self-opionated posturing! Replace the bridge NOW!

Sincerely,

Georgia Ellis

I have been traveling to Hatteras Island on vacation for 20+ years and if this bridge is not replaced soon it will have an impact on not only myself and the many other tourists who travel here each year, but the tourism industry on the island as well. I know many people, my family included, who are starting to think twice about visiting the island because of the safety concerns when crossing the Bonner Bridge. Please adopt the new Preferred Alternative plan and replace the Bonner Bridge immediately with a new parallel bridge.

Sincerely,

Abigail Cramer

Dear NCDOT Outer Banks Task Force Members and Dare County Commissioners and their Representatives, I have owned a beach front home in the Village of Hatteras since August 2006. I have been coming to Hatteras Island for vacation two to three times a year since 1998. I have witnessed a serious decline in pedestrian and vehicle traffic and business activity over these years. I have fishermen contact me about beach access, that decide against coming to Hatteras because they cannot fish The Point and The Inlets. I have families contact me about coming to Hatteras, but once they find out The Point and The Inlets are closed they tell me that is the main reason they come down that far, and they would rather stay in Duck or go to Virginia Beach. My own brother will not vacation in Hatteras anymore because The Point and The Inlets are closed and he does not even fish. He just loved sitting in his beach chair watching the wave action at the point and swimming in the calm eddy with his handicapped child. My sister and her family will not come to Hatteras anymore since they cannot dive for conch shells at The Point and enjoy the only place in the world where they can witness the natural ocean in all of her glory and fury, and no one in her family fishes. Now imagine the Bonner Bridge is no longer there. Imagine my brother and his family are renting a home in Kitty Hawk and want to take a day trip with his family to Waves to see the kitesurfers from REAL and fly a kite on the wide open beaches of Salvo. How much longer will it take to go by the long bridge? Imagine my sister and her family renting a beach front home in Nags Head and wants to take a day trip to Ocracoke (because my sister LOVES to shop). How much longer to take the long bridge

or the Oregon Inlet Ferry? What are the chances of my brother's and sister's families coming to Hatteras Island if it takes longer than it already does? My brother's and sister's families spend approximately \$2,000 each on food, entertainment, and shopping per week of vacation. Their rental averages \$4,000. each per week. Hatteras Island has already lost a major portion of their families' vacation funds because of beach closures. Now take away the day trips that the loss of The Bonner Bridge will cause and that equals \$0.00. Do what needs to be done to keep all of the Villages on Hatteras Island alive and profitable. Replace The CURRENT Bonner Bridge. Trustingly, Bo Kali Saint-Wyatt Property Owner Hatteras Village North Carolina

Sincerely,

Bo Kali Saint-Wyatt

Our family has been long time visitors to Hatteras Island and my brother had a house built in the village of Avon. We visit the island every chance we can and it is a concern that the only way to reach our destination is by crossing the Bonner bridge which has a safety rating of "2". That is just asking for a disaster and if the bridge situation is not rectified a disaster is exactly what will happen. I just hope that neither my family or any loved ones are on the bridge when it happens.

Sincerely,

My family has vacationed on Hatteras Island since 1978. Crossing the Bonner Bridge has always meant we are "there". I endorse replacing the bridge as soon as possible with a parallel bridge if repairs to the Bonner Bridge are not feasible. I hope a "parallel" bridge would provide the same look and feel to crossing Oregon Inlet as you get now on the Bonner. Hopefully this can be built safely and quickly, with as little impact on the community, vacationers, and wildlife as possible.

I agree with the above statement. You should also add the list of agencies, groups and "interested parties" who have, in some cases, seemingly delayed the construction of this bridge while totally disregarding the danger the old bridge poses to residents and visitors alike. People need to know whom to contact should (please forbid) something happens to someone, because of the current deteriorated structure.

Sincerely,

E. Richards

The bridge needs to be replaced now for many reasons but with the times as hard as they are now it will only cost more if we wait. I love the Outer Banks and especially Ocracoke Island by waiting any longer would cause extreme harm to the economy to the island. I retired from the USPS and know first hand how hard it is to make a decision through all the red tape. It seems that every thing has been done. Please ACT now so I will have a way to bring my grand children to the most special place on earth and they will love as much as I do. DO NOT WAIT!!!!!!

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Laura Depew

Please replace the bridge ASAP! Everytime we visit the OBX we are afraid we'll need to be evacuated. Once the storm starts the ferry stops so the bridge is the only way out... scary thought about all those cars sitting on that bridge!

As a local I hate the thought of having to cross the Herbert C. Bonner bridge due to the lack of structural soundness. But the thought that it could collapse at anytime injuring if not killing anyone who is caught in transit is unbearable. Being that the bridge is the main entrance and exit to our island replacement is desperately needed immediately. Please don't wait for the bridge to collapse before something is done.

Sincerely,

Amber

Four of the saddest words are: "I wish I'd known"! The fact of the matter is that we do know. We know the condition of the bridge before a tragedy occurs and we know the value of the inhabitants and of the tourist business on the livelihoods of those on Hatteras Island and all along our coast. How can we not act on the facts as we know them. After all, what's the alternative? Let's act responsibly now!

Hello I am a government employee of a natural preserve in Toledo, Ohio and the surrounding areas. I would like to state that public safety and community concerns have and will always come first with our park district. Preserves are built for the public to enjoy and I would recommend eliminating the "long bridge" option and replacing the Bonner Bridge immediately with a new parallel bridge. I have been not only been visiting the Cape Hatteras National Seashore for 26 years, but I and my entire family included, volunteer to help keep Hatteras a clean and safe area for the rest of the public to enjoy as much as we have. I know how important it is to have fundings from the public to keep and maintain a natural preserve, but if these "environmental studies" continue to disrupt the public, eventually no one will want to come visit the preserve or the lighthouses. Your fundings will drop dramatically. I would suggest to put your park visitors and local community as your number one priority at all times.

Sincerely,

Alice M Jacobs

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

To Whom It May Concern, I have been vacationing at Hatteras for almost twenty years and have enjoyed every moment of my time with the residents of NC. These individuals have cleaned my rental homes, served my meals, sold me fishing tackle and poured my beers. They have told me stories about past events, of when and where to fish and now some of those same folks might even refer to me as a friend. Our lives are intertwined and I cannot stand idle while this important matter is being discussed. The continual and seemingly unreasonable delays associated with replacing (not just repairing) the Bonner Bridge is both a societal and economic time bomb waiting to detonate. Failure to immediately replace the bridge with a parallel bridge, before a catastrophic event occurs, is the proper and just decision of the local and state government. A collapse of the bridge would devastate a local economy heavily dependent upon tourism. For example, look at the economic impact of Hurricane Isabelle. Consider the effects felt by the residents of Hatteras when they became an island inaccessible by anything other than a boat for almost two months because of a 2000 ft. breach across route 12. Now just image another situation whereby the 2.4 mile span disappears and we are returned to the pre-1963 mode of access by ferry. This bridge collapse would devastate the economy and allow the existing societal problems to breed unchecked. Now imagine if a frayed elevator cable was ignored and individuals were fatally injured as a result of the cable failure. There would be outrage and every elevator in that particular building, group of properties or across a city would be checked for cable potential cable failure. It is common knowledge, the bridge is failing and nothing is

done to replace the bridge. We do not need years of environmental studies to determine whether or not a parallel bridge should be built. The wellbeing of those islanders who travel daily on the Bonner Bridge trumps any concerns voiced by the opposition for replacing the Bonner Bridge. When I travel across the bridge, my windows are rolled down and seat-belt unbuckled as if to prepare for a potential escape because of the of the Bonner Bridge state of disrepair. Please replace the bridge now, lives are potentially at risk each day the bridge is allowed to remain crumbling. Respectfully,

Sincerely,

David J. Burkle

Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

my name is raymond austin. born and rasied on hatteras island. i can remember when there wasnt a bridge. it wasnt a good thing. if the island doesnt get a bridge,then our island cannot sureive. small busniess will have to close down. and tourisum will no longer be the same. who wants to ride ferrys in the middle of the summer? i dont. we need this bridge now

Sincerely,

raymond austin

As a home owner in Rodanthe I am concerned about the safety of the current bridge. I would like to see the existing bridge replaced with a parallel bridge as it is a better use of tax payer funds than the alternative. James Thornbro

Please stop the delays and start construction on the parallel bridge asap. I would hate to see that bridge collapse while 100s of people were on it. Also, think about the enviromental impact that would have with all the cars/truck going into the inlet. Thanks Jim Walston

Eliminate the "long bridge" option. The cost of a 17 mile long bridge would come at a huge cost not only to the state but to the tax payers. Has anyone even thought about not only the cost to build the bridge, but the cost to maintain it?????? That cost alone over several years could be breath taking. WHY are these special interest groups being so unpractical. I cannot believe these people would want to take away the beauty and "fun" of the Cape Hatteras sea shore?

The bridge is not only a vital transportation lifeline but a huge public safety issue. My friends and family travel this bridge weekly in the summer months. The saying is "cross the bridge with your windows down, you never know when a section may give." Doesn't that give you a great feeling knowing that you are putting your family in danger every time you cross the bridge. Federal and State money is spent daily on projects that have no safety concerns. This is a HUGE safety concern that needs to be addressed without delay.

Sincerely,

The Ellis Family

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Since my son and his family live there, I am a frequent visitor to Hatteras Island. I am very concerned about the safety of the existing bridge. Additionally, my son is a charter boat captain and my daughter-in-law works for a large realty company. The economic devastation if there was no bridge access to Hatteras Island could not be measured. Please take action immediately to replace this bridge.

Sincerely,

Carole B. Wyncoop

The Bonner bridge should have been rebuilt where it stands by now to continue to provide safe and cost effective public access for all to Hatteras! Virginia Coastal Access Now (VCAN) supports the immediate replacement of the Bonner bridge, the position of the Citizens Action Committee of Replace The Bridge Now, and the State of North Carolina in this effort.

Sincerely,

Mark Feltner/VCAN

I have owned a home in Hatteras Village for 6 years but I have been vacationing in Hatteras every year since 1984 and that includes each of the 5 years when we lived in Thailand from 1987 -1992. To my wife and I Hatteras is calmness at a time of chaos, quietude at a time of too much "noise" and restorative beyond any thing or any place we've ever been. So, please immediately adopt the "preferred alternative" so our access is not blocked. Thank You. Marshal Bear

- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

This immediate replacement is very critical. We own a cottage in Avon, NC and travel over the bridge many times since 1997. To have the bridge down to one lane due to necessary repairs creates many delays and it is pretty scary to see this bridge obviously deteriorate before our eyes. Please support our recommendation.

Sincerely,

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

It is so very sad that environmental groups can even have a say in the safety and security of the public. The longer it takes to build a new bridge, the greater risk to human lives. The residents of Cape Hatteras National Seashore Island love the land they live on, and they would never suggest anything that would hurt the environment. The bridge is unsafe, people's lives are at stake, the bridge needs to be replaced immediately, the plan supported here is sound..the decision is very simple, replace the bridge immediately. Tell the environmental groups opposing the new parallel bridge to mind their own business, to worry about their own problems and to stop trying to ruin the lives of every person on Cape Hatteras Island. Tell them to go to the Gulf and worry about the oil that will soon be polluting our entire ocean, maybe they can do some good there. Thank you.

Sincerely,

Barbara Granquist

Subject: Comment on Bonner Bridge Environmental Assessment

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

We can't wait until the bridge fails. NO MORE STALLING! Lets go now! Build short bridge -- that's what we can afford. We have had too money spent defending frivolous delaying tactics by people whose main desire is to stop beach access and bankrupt the people who live on the Outer Banks by destroying their tourist industry!

Sincerely,

Ronald Shackelford

I love nature as much as the next person but, you are talking about peoples daily lives and livelihoods being severely impacted if the Bonner Bridge is not replaced in a timely manor not to mention the consequences to tourism. In the ten years I've been traveling to Hatteras Island, I have yet to see a tourist or local who didn't respect nature so why do environmentalist feel the Long Bridge is so necessary if citizens are abiding by the law and respecting and caring for nature? Once again, I endorse the new Preferred Alternative for immediate replacement.

My family travels over the Bonner Bridge to get to our house in Avon. It grows more and more fragile each year. God forbid it collapses while we bicker over the way to replace it. There is no money for a 17 mile long bridge. We need to replace it with a parallel bridge as soon as possible.

Sincerely,

Barry Mark

It matters little how the birds, beaches, or anything else in the area looks or survives if you strangle the locals who call this area home and deprive visitors the chance to see wildlife in the home environment. The bridge must be built or should be wait till this one falls and takes some of the politicians along for the ride.

Sincerely,

Janice Sykes

As a native North Carolinian, I can remember our family's first trip from the ferry across the Bogue Sound to Ocracoke Island to Hatteras and across that bridge and over to Roanoke Island for the re-enactment of the Lost Colony. I'm proud the Dept of Transportation is supporting this effort. To build a 17 mile bridge in a huge economic downturn is unnecessary and economically unfeasible. If the original bridge is already there, replacing it with one parallel is just common sense, fiscally and literally.

What is going on in North Carolina? First the Audobon Society and the Park Service close the 75% of the 70-mile stretch of beaches for an unusually long time causing tourism decline and local financial hardships. Now this? As owners on Ocracoke we have been traveling to the Outer Banks for 30 years and have been donating money where needed, the preservation of the Coast Guard Station for one. One surefire way to kill everything below Nags Heads will be more political crap with the bridge. Vote out all sitting incumbents this November and see if that works....anything is better than who is in there now.

Sincerely,

Jester

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

The environmental groups have a very questionable agenda which seems pretty self-serving. They have already done irreparable damage to the economy of Hatteras Island through their over zealous restrictions on beach access. Please take the reasonable approach by replacing the Bonner Bridge immediately with a new parallel bridge. Eliminate the "long bridge" from all further consideration. For Heaven's Sake, we cannot afford such an impractical option. Diane Lea

I enjoy going down to Hatteras Island and have for many years but I worry every time I cross the Bonner Bridge that it will collapse. For the future safety of visitors to this beautiful island and for the economic future of the citizens that live on the island, I recommend that you replace the Bonner Bridge immediately with a new parallel bridge.

I have been going to the Outer Banks for approximately 25 years. I own three time share properties there and make 5 trips a year to the OBX. I have only one vice in my life and that is FISHING. Like other fisherman and women. We SPEND LOTS OF MONEY going to the OBX. The Bonner Bridge needs to be rebuilt next to the old one. Special interest groups will stop at nothing to destroy the economy of the OBX and stop nature lovers such as the people who love to fish from getting to the beaches. Please do not fall prey to their devious means to force their agendas on US.

We have been going to the OBX for 15 yrs. My Twin Grandsons are 4 yrs. old and were first taken to the OBX when they were 4 months old. We visit the OBX 2 or 3 times a year. It is our favorite vacation place. We were last there in the OBX in March 2010 and plan to be there again in September 2010. It seems to me there are GREEDY SPECIAL INTEREST GROUPS WHO HAVE A HIDDEN AGENDA who will stop at nothing to KEEP PEOPLE OFF THE BEACHES IN OBX. Please don't give in to their selfish demands.

I am writing to make my voice heard about the replacement of the Bonner Bridge to Cape Hatteras. I've been visiting the Island for 30+ years, and have enjoyed the sights, sounds, fishing, and overall "mental relaxation" that Cape Hatteras provides. It is vital that you consider a new parallel bridge immediately, and stop the nonsense of a Long Bridge option, which is not only fiscally irresponsible, but just not needed. Since the Bonner Bridge was originally built with a 30 year life span, the time is now to begin work on a parallel brige. Please, please consider the construction of a parallel bridge. I enjoy visiting the island so much, I would be more than happy to not only send in a donation, but would also be willing to pay a toll for a new bridge. I thank you for your consideration. These "Special interest groups" that keep demanding study after study, believe people should not live on a barrier island. They want to wear us down so we finally give up. If they have their way the bridge will be allowed to collapse making it so difficult to get on the island that people will lose interest in living and vacationing on Hatteras Island, then the birds can have it all to themselves. I am sick and tired of these morons interfering with our way of life. Let's STOP this INSANITY...

I am a home owner in Avon, Hatteras Island, and fully support replacing the Bonner Bridge. Everytime I cross the bridge I wonder why this old failing bridge has not been replaced as, should it fail with traffic passing on it, those who have held up this project will be fully responsible. I urge all involved in the decision making process to act now and delay no further. Respectfully, William Chrencik

Sincerely,

William Chrencik

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Let's keep the roads safe for visitors and residents. Thank You! Mike Tidd

Sincerely,

Michael Tidd

Pass some legislation or get some judicial ruling where the eco-whackos and their lawyers can not sue in order to line their pockets with our taxpayer dollars. That is what it's all about. I don't believe they give a damn about the birds and other wildlife. They are after our money. If the government makes the decision to go with the practical & sensible short bridge replacement; they will sue.

Sincerely,

The use of the Bonner bridge is essential to the survival of the outter banks natives without the tourism industry N.C. would lose the major part of its coast line. The long bridge option is ridiclous especially in these times of poor economy. The Pea island refuge is doing just fine with the current road,I see no reason to spend that kind of money for a long bridge option.

Sincerely,

Michael Lemley

The Bonner Bridge is the only link between Hatteras Island and “the rest of the world.” The bridge has been placed on the “worst bridge list” and need to be replaced NOW! Hatteras Island is a moneymaker for the state of NC and if we are cut off from “the rest of the world” the tax dollars to the state of NC will be drastically reduced! Hitting the government in the pocket book. We are hard working, law abiding, tax producing citizens of this state and respectfully request you just replace the bridge NOW! You have done enough studies, looked at enough plans, and postulated enough for a lifetime! The economy of this island is in your hands. Please get off your collective duffs and make this happen! Thanks you. Wayne & Donna Thomas 50235 Kings Point Dr. Frisco, NC 50235

The thought of a 17 mile bridge is not a pretty picture for those of us who travel to Hatteras and the other islands on a motorcycle. When it's windy it can be pretty scary, I would hate to drive 17 miles in that. Safety First, and the lively hood of all those living and trying to make a living on the islands.

My daughter will turn 16 this year and will be driving back and forth from Kill Devil Hills to Buxton to visit and work with her father. The idea that she will be traveling on a bridge that is now 17 years past its life expectancy and is rated one of the worst bridges in the state is enough to scare any parent. Please put lives first and don't let the never ending environmentalist objections stand in the way of safety. I hope the decision makers never had to look back after a tragic accident and wish they had done more when they had the power to do so. This is not a political decision....it is about public safety.

Sincerely,

I have been traveling to the Avon, Frisco, Buxton, Hatteras Village area with my family for the last 13 years. I had NO IDEA that the bridge we've used to get there has been unsafe & outdated since 1993 - essentially for every trip I've made to/from the island. Without safe access I will seriously question any future trips there, as I'm sure hundreds of thousands of other visitors will. The greatest economic damage will come in the loss of real estate values of the homes on the island that will be inaccessible to renters who vacation there. Not only would this be devastating to the owners, plummeting values would cause an immediate impact on the real estate tax revenue of the county as well as sales & other taxes to the state of North Carolina. Are the special interest groups who oppose the realistic, immediate and more economical bridge replacement prepared to put their money where their mouth is and reimburse home owners, investors, business owners, the county and the state for the outrageous economic disaster of having this island cut off by a bridge failure? Let's all use common sense and REPLACE THE BRIDGE NOW !!

Sincerely,

Roger Miller

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

This is the only practical solution to keeping Hatteras Island connected to the rest of Dare County. It is also the least disruptive. As a regular visitor to this beautiful island, I hope that this situation gets resolved quickly with as little hardship to this area as possible.

Sincerely,

Judy Giannuzzi

For the safety of all of us who love the beautiful trip to Hatteras and all it offers, the bridge needs to be replaced now as it stands, not this alternative which is not practical when other projects need funding. I am a Dare County taxpayer with property for 20 years in Duck.

Sincerely,

Irene McKenna

I have been vacationing in the Outer Banks for 19 years and it is a beautiful area. I travel over the bridge to get to Hatteras island and it is scary at times. I would like to know that the bridge my family and I travel is safe. It would be a shame to have access to this wonderful area of our country limited or inaccessible. I am hoping that the state and federal can work together to make this a reality for vacationers that so enjoy the island.

Sincerely,

I have property in Ocracoke that I access by using the Bonner Bridge. This solution for replacing the bridge is necessary. It is also necessary to stop the delay and proceed with the replacement. North Carolinas long term economic benefits will be assured when the bridge is replaced, sooner rather than later or at all as a very small number would like.

Sincerely,

Please begin immediate construction! Hatteras Island has a significant economic impact in Dare County. If we are left without the bridge - we are left without a lot of business and this blooming area will become stagnant and lots of people will loose their jobs. How about evacuation in times of a hurricane? A ferry will not have time to transport all the people off the island especially during the summer (hurricane season) when the island is packed with tourists. There is no time to loose. Act NOW! Please consider in the future the access into Rodanthe that gets blocked many times during the year at Mirlo Beach due to oceanside flooding. Please put that on your agenda in the future since that road will be washed out soon enough.

Sincerely,

Ana Gray

The original plan of almost 20 years ago was to replace the Bonner Bridge, (current bridge). Those southernmost portions of the bridge would remain as viable fishing platforms similar to the catwalk that currently serves many anglers, at the southern end, on the sound and the ocean sides, almost year round. The new bridge would paralell the remaining structure, but be installed with state of the art technology which would provide safe access on and off Hatteras Island for the next thirty or more years. It would also solidify the vacationer and boat fishing communties that have always been a vital part of the Outer Banks economy and lifestyle, from Nags Head to Ocracoke. Don't make the mistake that the NPS has made with absurd, overreactive beach access closures that are already killing Hatteras Island. Wake up. Do the right thing. Get it done.

Sincerely,

Rick Neumann

As a Delaware resident, I just watched a bridge project unfold over the Indian River Inlet (IR). The initial bridge design was a monstrous project that didn't even hold up - yet it cost our state a ton of money. After a change of leadership, we were able to get a bridge designed with minimal impact to the land and feasible for our state. PLEASE do not delay the Bonner Bridge so that it turns into the mess Delaware faced. Delays are only going increase the cost and chase folks away from coming to the area. The long bridge idea stinks just like Delaware's original IR bridge design that failed!

Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Marcia Laricos

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

We have all seen the cost of long and unnecessary environmental impact studies with the problems in the Gulf. We do not want to have a fatal problem with the Bonner Bridge before action is taken or an economic disaster that completely closes traffic to the Outer Banks. Action NOW is the intelligent thing to do for the people and the environment.

Sincerely,

George S. Chamberlin

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Not only access to Hatteras, but also to Ocracoke. Without the Bonner Bridge, the average emergency transportation cost for an individual would be around 12,000 dollars because you would have to be in a helicopter...that's just the ride to the hospital for an emergency!!!! The citizens of Ocracoke demand a reliable route to amenities on the Northern Outer Banks. Thank you for your time and effort.

Sincerely,

Roger H Meacham III
50 Cutting Sage Rd
Ocracoke

In addition to the above - to which we subscribe - consider LOSS OF LIFE should the bridge collapse. The resulting drastic consequences are too terrible to even imagine. ----- For goodness sakes, do not be pushed around By VOCAL MINORITIES WHO HAVE **NO REAL INTEREST** OR FEELING FOR THE AREA, THE PEOPLE, THE WAY OF LIFE. We are property owners and tax payers of Dare County, the state of North Carolina and the United States of America.

My husband and I own a beach house in Rodanthe. We believe that the Bonner Bridge is unsafe. Mother Nature has shown what she can do and it would not take much for this bridge to fall. We had to take the ferry to the island after the storm Nor Ida. It took us all day....luckily it was not a life or death/time is of the essence situation (just wanted to see how much damage to the house from the storm) Not the most effecient mode of transportation. Certainly not a viable alternative in an emergency situation. I find it so very hard to believe that given the bridges saftey rating there is even a question about how badly and how quickly a replacement ridge is needed. The lives of humans are to valued. People that live year round on Hatteras Island should know that in the event of an emergency where evacuation (or medical needs) made it necessary to get off the island in a timely fashion that the route is a safe one. This should be so obvious. Tax dollars should be spent im! mediately on this TOP PRIORITY PROJECT. To do otherwise is irresponsible.

Sincerely,

Cheryl Norman

Access to Hatteras Island is of great economic importance to Dare County. Because of bickering over the environmental impact of stabilizing the jetties at Oregon Inlet we have seen much of our fishing industry move elsewhere - that leaves tourism as the major industry of the area and without ready access to Hatteras Island those people will suffer devastating economic problems.

Sincerely,

Paul Deal

My husband and I just drove our motor home over the Bonner Bridge after a wonderful weekend stay at Cape Hatteras. Signs that we saw along the road prompted me to research the condition of the Bonner Bridge. I am appalled that this bridge replacement has gotten tied up in federal government bureaucracy, and I'm concerned that in the not too distant future we won't be able to return with our motor home if the red tape isn't cut and construction began. PLEASE move forward with this project.

As a former Marine Biologist working for the federal government I fully understand that the wheels of government sometimes turn very slowly but the fact is that there has been ample time to review all the documentation and to risk the lives (and livelihood) of several thousand people is unconscionable. Please make your decision as to which option ASAP. Thank you.

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

As permanent residents of Hatteras Island, we consider the replacement of the Bonner Bridge to warrant the highest possible NCDOT priority. It is our only link to the mainland. In storms and when medical emergencies arise, the bridge is vital to our health, welfare, and safety. We can tell you from experience that even with the bridge, when you need medical attention, that 50 minutes to the Nags Head hospital can be a very long ride. We cannot imagine what it would be like if we had to take a 2 hour+ ferry. There is no question in our minds that some will die if the bridge is not there to expedite their trip to the hospital. Please end the studying and get started immediately on the construction of the new bridge. Thank you for your understanding of the urgency of this matter to the residents and visitors on Hatteras Island.

Sincerely,

Two additional points: A fixed terminal groin should be incorporated on the North side of Oregon Inlet to protect the north end of the new bridge from 100 year events, to lessen the vacuum effects of Oregon Inlet on South Nags Head, and to stabilize the navigation channels in and near Oregon Inlet and make future planning for Hatteras Island more realistic and dependable. Funding for the dredging of Oregon Inlet to help maintain a useable and dependable navigation channel, unlike that which exists today. Further studies concerning the replacement bridge and stabilizing of Oregon Inlet would be a waste of taxpayers' money in that they have both been overstudied and opposed by the same factless extremist.

Sincerely,

Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

this bridge is the lifeline to the southern Outer Banks. please replace asap. we have a vacation home in Frisco that we, as well as many renters, use. thank you.

Sincerely,

Barbara Howe

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I have fished with my husband off the catwalk on Bonner Bridge and viewed with dismay the supporting pillars that have completely deteriorated from their support and are now hanging from the bridge with their bottoms moving freely in the currents of the Inlet. I no longer will cross that bridge until it is replaced and inform everyone to whom it is relevant about the conditions of this structure. Enough with the studies, reports, statements, etc. ad nauseum and get this thing replaced before someone gets KILLED!!

Sincerely,

Deanna Davis

- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Something needs to be done before people get hurt. State agencies acknowledge the fact that the bridge is "structurally deficient" and is only rated a 2 out of a possible 100 - The bridge is dangerous, it is a safety issue - The End - what more needs to be known or said? Does the H.C.B. Bridge have to collapse with a bus full of children on it before something gets done? We the people (especially the children) of this country, county, and island should be protected from this kind of unnecessary threat.

Sincerely,

Lori Frank

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Along the lines of public safety, I would like to add that as a mother I worry that children who are frequently bussed cross the bridge are in extreme danger. I have read that the safety rating on the Bonner Bridge is worse than that of the bridge in Minnesota that collapsed a few years ago. I have had sleepless nights thinking about the tragedy of the Bonner Bridge collapsing under the weight of a school bus. Please replace our bridge and prevent this unimaginable scenario. I am also in favor of a bridge connecting the mainland of Currituck to Corolla. I believe that small businesses on both sides of this bridge would benefit tremendously, which would increase job and help to boost our ailing economy.

Sincerely,

Emily Dobie

The process by which approval is being sought has become a travesty of justice and ethical behavior. Those who seek the permanent closing, those who fear making a decision, those who feed at the taxpayers trough should be ashamed of their actions. It is likely that we will have state employees, attorneys, and others that will complete their work careers and retire while engaged in this seventeen year debacle.

Sincerely,

I have been a 40 some year vacationer on the OBX and a member of the OBX chamber for a few years. I would hate to think that something drastic has to happen before a safe bridge is put in place. If the bridge needs to be replaced then REPLACE IT!!! The thousands of people that visit on a yearly basis, the hundreds of residents on a daily basis, they NEED to know that they are crossing all this water in a SAFE manner. If the money is already in the budget then what the heck is the problem...nothing lasts a lifetime not even a bridge.....so replace it please immediately.

Sincerely,

My family and I live in Nags Head and travel frequently to the Pea Island beaches for recreation. Each and every time we travel over the bridge family members are told to put their windows down so , should the bridge collapse, the possibility that my husband and I could rescue our family would be greater...that is if we survive the fall. What part of dangerous do people not understand?

It's time for someone to tell those environmentalist jokers to take a walk!!!! It's not like anyone wants to deliberately endanger wildlife, just build a replacement for safety's sake. It's quite apparent the environmentalists have ZERO regard for the safety and well being of parents with small children or anyone else for that matter crossing that crumbling bridge every single day. The joke around here is to only drive across the current bridge with your car windows down in the event of it falling into the water. Sounds like more than a joke, it sounds like people are truly scared to cross a bridge that scores a 1 or 2 on a federal scale of 100! Build the replacement! Build the replacement! Build the replacement! PLEASE do it now before it is too late and avoid tragedy. Maybe we leave the old bridge exclusively for the environmentalists to cross after our safe new shiny bridge is complete. Just a thought!

Sincerely,

Matt Dubec

This bridge was build in 1963. People have been living and recreating on the barrier islands of the outer banks since our country was founded. Lets keep the access available and recongize the recreational asset that the people of the banks deeded to our country by keeping it available to all. This bridge will fail, people will be stranded with limited resources. Restoring access will be long and difficult. Don"t wait any longer.

Sincerely,

we purchased our home Feb. 2010. on the Outer Banks. We had no clue that we would have had to worry about something like this. We did not know about it before we bought our home and would have thought twice about buying if we would have known that it takes this many years for this state to do the right thing for their property owners. Its had to believe public safety is not #1.

Sincerely,

nancy smonskey

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

To Whom I May Concern: I am writing to voice my support to moving ahead with the replacement of the Bonner Bridge, instead of awaiting further studies. We are property owners there for the last five years and our family has enjoyed visiting frequently for the past three generations. I strongly feel that this is the time to move ahead so that this bridge might be building by 2015. We are extremely concerned about the safety issues involved here. The Bonner Bridge was opened in 1963 and slated for a useful life of 30 years. The bridge is now 17 years past its due date for replacement. It has been reported by DOT that it has a sufficiency rating of about 2 out of 100 and has been kept open with millions of dollars in repairs. Please, do not stall this decision any longer for the people living and working in the region as well as for the safety of vistors to the Hatteras Island Outer Banks. Best regards, Karen Wheless

Sincerely,

Karen Wheless

Please take this matter seriously and engage in actively moving to replace the Bonner Bridge. As someone that has utilized this lifeline to the island for over 35 years, and has seen firsthand what has happened when the bridge is unavailable, I implore our government to take action, fund construction, and replace the Bonner Bridge. Peoples lives, literally their lives are at stake every time they cross this inlet on the Bonner Bridge.

Sincerely,

Chris Hanburger

Why many years does it take to replace a 100 year bridge? Where is the leadership of our fathers? When will the public have representation that formulates planning halfway through the lifespan of any engineered project? Common sense must rule and those who ignore public safety bear the responsibility and liability of endangerment.

I believe that the Bonner Bridge is due for replacement immediately. I have grown up spending my summer vacations on Hatteras Island with my family for the past 17 years. I know that we, along with many others, would be devastated if we could no longer access it. Replacing the bridge with one parallel to it would ensure economic stability for the island, as well as the safety of the residents and visitors. I am blown away by the Special Interest Groups plan of a 17 mile long bridge. Their impractical plan in such a poor economy shows lack of responsibility and concern for everyone on the island, and anyone who plans to visit.

Sincerely,

PA

I own property in Salvo which we use to rent. I no longer rent it as I am getting ready to retire and will be using it more. Please replace the bridge with parallel bridge before something happens to the old bridge, like falling down and killing people on it. It is about time that we stand up to the environmentalists. You have the money to replace the bridge use some common sense and use it. This country is in bad shape so where would you get the money for the long bridge. If this bridge fails now it will kill Hatteras Island. As stated above don't do anymore environmental studies. What is going to change. I would think that building the long bridge would do more harm to the sound than building a bridge next to the old one. If you build the long bridge Pea Island will not be accessible to the people. And if the National Park Service has their way this will be the only area open to the people once they close the beaches. Do what is right build the parallel bridge now before something bad happens. Thank you.

Sincerely,

Cindy Thorne

- Begin immediate construction without further environmental studies and delays

NCDOT: If the funds are available in today's dollars to replace the Bonner Bridge, then use the most cost effective and practical plan for sustainable use and "ease of maintenance" with safety number one as your overall goal. We certainly want a plan that has minimal impact on disrupting traffic flow, marine life and the environment. The value added proposition is that NC has a very valuable asset within this area and "over development" is not going to be an issue as much as the safety issues of the bridge. You know what to do. We can study anything until the outcomes become painfully obvious, or stall in order to change the base line of the values on each impact (environmental) but at the end of the day, there should not be any major reason other than mother nature's ability to destroy what we build and try to maintain, that should keep us from moving forward. Respectfully submitted, Tolar Nolley "Born" in Goldsboro, NC, 1957 Virginia resident

- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

This entire issue, the procrastination, and ugly politics is very unfortunate as it is counterproductive to the needs and safety of the community. There is an obvious solution that has funding available yet the minority interests are allowed to disrupt the process and waste the time and money of local governments. It is time to act by building the parallel bridge.

Sincerely,

Daniel Bofinger

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

We live in Massachusetts, but own property in Hatteras. We love it there, but are very concerned about the Bonner Bridge. Seventeen years is a long time to wait to do something. Hopefully, it won't take a tragedy. Unfortunately, there is no other way for us to get to Hatteras.... Please do something, before it is too late, and we hear about the sorry's and regrets.

Sincerely,

Carol Widen

Are you going to wait til the bridge gives way and lives are lost to act on this.. I do believe you have had sufficient amount of time to decide and delegate this to be completed..Our family has been going to the Outer Banks for a number of years and have felt safe but this definately puts a new light on it..Traveling on a bridge that is not safe is very inconsiderate on your part when this could of been avoided years ago. Please make the right decision to get the new bridge started this year and built before a major catastrophe happens and lives are lost.. Sincerely Larry Bish family

I am a business owner in Hatteras Island where we employ several full time people with benefits and some part time employees. We purchase products from every corner of the country, from CA to NY and from MN to Florida. Without a bridge I would not need to have the same kind of merchandise that we have at this time. I won't need to employ any full time personal, and last but not least safety for its citizens is something that our government cannot and should not deny. Everyone is aware of the condition of the Bonner Bridge the only access to Hattera Island. There have been professional engineers evaluating its safety and grading it a 2 out of 100. Millions have been spent in repairs and that has added some 10 years the Bridge life, but that deadline is coming soon and time is of the essence. After 20 years of delayed action and several studies it is time to act. Build the replacement bridge now. Save lives, save jobs, save us from a tragedy.

Sincerely,

We own a store that is totally dependent on the bridge not only for transporting all our products here but for also transporting 80% of all our customers here. Most of the companies which supply us are North Carolina businesses which also send hundreds of truck loads of products to other island businesses. We are open year round and provide full time employment plus benefits to many people most of whom are the primary wage earners in their household. Any disruption of our only drivable route here would affect multiple businesses, employees and their families, and the extremely large tax base generated here from tourism real estate and income. The entire economic structure here would dissolve without the bridge.

I have started taking the ferry system to Hatteras Island due to fear of the possibility of failure of the Bonner Bridge. It is very inconvenient for me and as a result I visit the Outer Banks less frequently. Some immediate action needs to be taken to start alleviating the problem with the out dated bridge. Immediate construction should be started or the Outer Banks will be heavily impacted economically due to less tourist visits.

Sincerely,

I live just outside of Charlottesville, VA, but have friends on the island that I visit regularly. I think replacing the bridge with the new parallel bridge is a GREAT idea. The long bridge plan doesn't make sense to me. I also feel that there have been enough environmental studies and delays-The bridge has a rating of 2 out of 100?? Hellllloooooo!!! What are you waiting for? Just replace the bridge already!

Sincerely,

Cheryl

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration, the Environmental Protection Agency, and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I concur and support the above 4 points. My family and I have been visiting Hatteras Island for 25+ years. Vacation and fishing trips - we help support the Island economy as well as having great, memorable times. Thanks for listening.

Sincerely,

Luke Falconer

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Certain environmental groups have only one goal in mind and that is to stifle tourism on Hatteras Island. They will throw every imaginable block at the process and their efforts must be stopped. There should be no more environmental study. The present Bonner Bridge is unsafe. There is no reason to wait for a disaster that could bring about many deaths and injuries.

Sincerely,

Don & Jean Delwiche

- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I believe any further delay in replacing the Bonner Bridge with the new preferred parallel bridge option would be irresponsible. The current bridge is already decades past its engineering design life. Do not wait for a bridge failure, loss of life, etc., to spur you to act. The bridge replacement needs to start now.

Sincerely,

Don't let what happened in Minnesota a few years ago happen here. Lawsuits associated with injury or death due to failure of the Bonner Bridge would further impact economic issues regarding funding of a new bridge. The statistics have long since been presented and support for the new parallel bridge is overwhelming, so do it now!

Sincerely,

Jason B. Heilig

We constructed a home in Avon, N.C., in 1987, and, like many folks, rent it in order to cover the costs. There is no question that we, and many like us, would be at risk of losing ownership of our home if we were unable to rent it--and transportation over the Bonner Bridge is therefore any absolute necessity. Considering the significant revenue that is generated by visitors coming to the Outer Banks, it makes no practical sense for the not to address the much needed bridge replacement as soon as possible.

Sincerely,

I have a home in Avon NC, southeast corner of Hwy 12 and Tern St. At present, my primary residence is listed below. Have been visiting the Banks for 60 years and have great respect and love for its beauty, people, history, and access. I'm concerned for Hatteras Island's continued vibrance, access, safety, future, if Bonner Bridge replacement is not built now. I support the parallel bridge because it is most economical, least intrusive. Please put aside the overzealous environmentalists who would take away Pea Island from those of us who enjoy its beauty, and keep the island accessible as it has always been meant to be. Thank you for your consideration.

Sincerely,

It would be a shame for the Herbert C. Bonner bridge to become damaged to the point it causes a safety issue that results in injury or death. I cross the bridge several times a year myself and still breathless at its panoramic views and memories that go back forty-five years. It is time replace the bridge now before it's too late...!

I would like to see the problem fixed before someone gets hurt or killed. I would hate to not be able to get to Hatteras to take my daughter like we do at lease twice a year if not more. It is one of my favorite places to be. My 4 year old cries when we go to Myrtle Beach because she wants Hatteras. There is alot of history to take in out there and would be a shame if no one could enjoy it. The beaches are cleaner than SC and much more enjoyable. Please help replace the bridge for us and children.

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I beleive we should listen to some of our environmental people and NOT BUILD A BRIDGE. WE SHOULD GO TO A FERRY SYSTEM. We are barrier islands. The sands will always shift. It is a waste of money to nourish beaches or build bridges wehre there is no good foundation. There will always be water Get an uptodate ferry system as is used in Northern Europe.

Sincerely,

KathrynP. Fagan

My family has been visiting Hatteras Island for the past 15 years, crossing the Bonner Bridge several times each year. My children, now adults, cross the bridge in their own vehicles. It is beyond frightening knowing that replacement of the bridge is 17 years overdue and though money is in reserve and plans are in place, the project still has not been started. Worse, the state is being asked, once again to consider unrealistic alternatives: the economically unfeasable 17 mile bridge and the totally inadequate ferry system. One can only imagine what an in season evacuation would look like using ferries. Cars would be backed up on Highway 12 into the Hatteras Inlet. The preferred alternative plan, submitted by NCDOT has been thoroughly researched and should be implemented immediately for the safety of all people who access Hatteras and Ocracoke Islands. Every delay puts more people in imminent danger as the current bridge continues to deteriorate making a collapse probable. It is no longer if it will collapse but when. Those organizations that are threatening legal action to prevent construction and further their own agendas, are holding the people who access these islands hostage. It is long past time to free the hostages by building the bridge ensuring expedient, safe access to and from the islands, and economic security for island residents. Please replace the bridge NOW!

Sincerely,

We must have this bridge replaced before the unthinkable happens. I am tired of being forced to endanger the lives of my family members by the simple act of driving over this bridge. Hatteras Island residents deserve the safety standards that all Americans receive.

My children would be devastated if Hatteras Island were no longer easily accessible during our annual Thanksgiving trip. I well remember the long lines, inconvenience and delays the year the bridge span was out. Constructing parallel replacement bridge was successful and convenient for Louisiana when they replaced the bridge between Slidell and New Orleans

the Jaegers enjoy a great house and rental at Frisco. Hatteras realty does a great job for us managing one of their prime locations. Don't let this go away because the bridge project fails. We pay over \$5,000.00 taxes to Dare County each year, And we are only one of the property owners on Hatteras who help sponsor such natural and wild beach experiences in this beautiful country of ours.

Sincerely,

I have been visiting the Outer Banks since before this bridge was built and have watched as growth has continued to the benefit of the surrounding area and North Carolina as a whole. As a life long resident of North Carolina, let me say that NOW is the time to proceed with the start of construction on a new, parallel bridge. We can ill afford to wait any longer as its current condition should be a cause of concern to the safety and financial viability of the area and all who travel on HWY 12.

I have enjoyed Hatteras Island for the past 17 years and have been a property owner in Frisco for the past 10 years. During this time, the Island has enjoyed unprecedented growth which has provided prosperity to the local and regional economy. The Bonner Bridge potential/inevitable failure is a real issue that must be resolved immediately to allow this area the opportunity to survive. I'm of the opinion that if nothing is done soon, we could see many very bad consequences. Further delay provides the "real risk" of the bridge's failure. These risks include loss of transportation for access to the Island to provide food, supplies, public safety (i.e. EMS, fire, police, and hurricane evacuation services), and the real potential of loss of revenue from the countless number of annual visitors to the Island. I urge you to replace the Bonner Bridge with the new Preferred Alternative that is outlined in the Environmental Assessment, dated May 7, 2010. For those of you making this decision, imagine the unimaginable risk of the bridge's failure. This replacement has been talked and studied to death and action is the only practical solution. Thank you for your much needed help in the replacement of the Bridge.

Sincerely,

Carl Cottingham

Subject: Comment on Bonner Bridge Environmental Assessment

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

Sincerely,

Ashley Gayle

Replacement of the Bonner Bridge has reached a critical point. Take into consideration the bridge that collapsed in Minneapolis MN. Is NC ready for that type of disaster? What if it happened on a Saturday or Sunday during Tourist season? As a lifetime resident of NC and 10 resident of Hatteras Island, the replacement of the bridge must happen now! Thank you.

I own a 2 businesses on Hatteras Island called Lighthouse Service Center and Lighthouse Auto Parts and if the bridge should fall into to the sea then everyone will suffer immensely. I have 10 employees and they are dependent on me. Audubon and Defenders of Wildlife and now the NC Wildlife Federation are all opposed to the short bridge alternative. They do not have any personal investment on Hatteras Island. It is time to make a decision for the people of NC. Enough is enough! All the roads around Raleigh never had the combined studies as the one Bonner Bridge has had! Make a decesion now!

Why is Senetor Basnights asking President Obama for money's to replace the bonner bridge when he has set aside 28 million for the next 3 years and 15 million to follow for the next 47 years to build the mid currituck bridge. This bridge is not a neccessity just a developers grab to over develop the fragile corolla beaches. Residents and vacationers want to preserve this area. Take the funds from mid-currutuck bridge and spend it on the Bonner. Stop spending my tax dollars on projects not needed and spend them on neccessities like the Bonner bridge. In this economy the mid-currutuck bridge should be even considered!!!

After more than 10 years studying this project, what will it take to replace an existing decaying bridge? Loss of life? A class action suit against the Department of Transportation? What should the next step be for the residents who so desperately need this vital link? In the last set of meetings, the response was unanimous - REPLACE THE BRIDGE NOW!!!

http://www.replacethebridgenow.com/images/final_logo.gif

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

As a homeowner in Avon - Kinnekeet Shores, the Bonner Bridge is vital to our rental season and it's very important that it be in good condition and safe for all travelers. Thank you.

Sincerely,

Gayle Novak

I have a property in Hatteras, but reside in Allentown, Pennsylvania. In Pennsylvania, we have over 2000 structurally deficient bridges...the most in the nation. This condition didn't happen overnight. I have witnessed for the past twenty years, debate over the historical significance, or the negative environmental impact that bridge reconstruction projects would bring. These self interest groups are well meaning, but too narrowly focused. Since then, we have bridges that are closed, or severely limited in their use due to their structural deficiency. Now the debate centers on how we can afford to pay the ever ballooning costs of reconstruction that should have been evident from the beginning. As you can imagine, the discussion is now about which taxes to increase. As you know, the Bonner bridge is the only access available to that part of the Outer Banks. Delaying the project in the interest of special interest groups will only increase future costs, jeopardize safety, and will have a huge negative economic impact. I trust that you will take the pragmatic approach and vote to replace the bridge now. Regards David DeWalt

There is never a time when our family is crossing the Bonner Bridge that I don't think about the bridge collapsing while we are on it. My husband has fished on a boat beneath the bridge and the view from there is very scary. Pieces of the bridge fall into the water and boats are encouraged not to spend time under the bridge. We have been driving the bridge for over thirty years - with our young children and now are children are driving themselves over this dangerous bridge. Now is the time for action before something deadly happens - it could happen to anyone driving over the bridge. We need a bridge to parallel this one and the replacement needs to begin asap. We have a rental home in Frisco and the time is long over due for the safety of everyone for another bridge to be built.

I am in favor of the most sensible plan, and that is to replace the bonner Bridge with a parallel bridge. It is most important that it be done soon. It should be done while the present bridge is repaired. It is important for the people who live and visit the islands. Do not allow the expensive and impractical long bridge.. Please do not allow alternatives to drag this important project on.

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

As an owner of three properties in Frisco, I urge you to please let this initiative move forward, as safety, the active rental markets and local businesses' viability are all at stake. More studies will not alter the need for a replacement and the longer bridge alternative is not fundable quickly enough. Replacing the existing bridge will have the least impact environmentally, least cost and could be funded with Federal Stimulus money. The landscape on Hatteras Island is already fragile and a long term sustainable plan is needed in order to continue the steady stream of tax revenues to Dare County and private sector revenues to the lives of those residents, fortunate enough to live there. A disaster is in the making and will have far reaching legal and economic effects if action is not taken quickly. Thank you for your consideration. Please listen to the outcry of your constituents.

I own a small construction company and 30% of our work is on Hatteras Island. As bad as the local building economy is, I can't imagine what would happen if the bridge is closed or worse if it collapses. The parallel option is the most cost effective choice. Besides that it will leave the beaches open for enjoyment of its citizens. Without further delay or any more studies please replace the Bonner Bridge with the parallel option now

I believe replacing the Bonner Bridge is long overdue. Any further delay risks the loss of this vital transportation lifeline. Without the Bonner Bridge, public access to Hatteras Island would be devastated with drastic consequences to residents, small businesses, property owners and millions of yearly visitors. Replacing of the bridge is vital for public safety as well as the economic, cultural, historic and social well being of the region.

I endorse the new Preferred Alternative outlined in the Environmental Assessment from the North Carolina Department of Transportation (NCDOT). This plan represents a practical solution that, first and foremost, calls for immediate replacement of the Bonner Bridge. This alternative has the support of the Federal Highway Administration and State and Local officials.

I recommend the following key components outlined in the Preferred Alternative –

- Replace the Bonner Bridge immediately with a new parallel bridge
- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

The current Bonner Bridge terrifies me so much I literally can not cross over it with my children in the car. My youngest is 3 and I have never driven him over the bridge. We own property in Frisco. There is no space on the bridge to pull over in case of an emergency and the guard rails are ridiculously low. This is the only bridge that overpowers my ability to drive with my children in the car and I am 43! There is even a link on Facebook where hundreds of citizens and vacationers also speak of their fear while crossing this bridge. Please replace this bridge now so the citizens and vacationers of Dare County can feel safe!

Sincerely,

Wende Pritchard

- Eliminate the “Long Bridge” option, which is impractical and unfundable
- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I'd hate to see this bridge collapse when it is the only road to get to Hatteras. Please approve to have this bridge replaced ASAP. Thanks.

Sincerely,

Nancy Greenstreet

- Use a Transportation Management Plan for development of NC Highway 12
- Begin immediate construction without further environmental studies and delays

I believe this plan can and will still provide the necessary protection that the sensitive Hatteras Island environment needs and deserves. Delaying and reconsidering is a waste of time and money. The long bridge is unrealistic. The latest short bridge plan addresses environmental, economic and safety concerns rationally and realistically.

Sincerely,

Ali Breaux

Build the new bridge right alongside of the existing one and finish this insanity. The sooner the better.

Sincerely,

John Graham

In an already challenging real estate market the delaying of building a new replacement bridge needs to end without any further delays of anykind. This delay and uncertainty has caused the ratio of closed price vs. listed price for the average single family home to fall to around 10% less than the northern beaches with more than an additional 100 days on market from listing date to closing date. I am a potential 2nd home owner in Avon however we have delayed our buying decision based on the decisions made concerning the construction of this new replacement bridge. Others are doing the same. My entire family have been long time visitors of the southern beaches but are fearful to journey there until the new bridge is underway then complete.
